Morris,

Thank you for the trial use of your construction access tire cleaners. We found them to be more effective than the quarry rock we have been using and the "cleanability" factor is great. In our heavy hauling schedule quarry rock gets plugged and ineffective in one or two shifts and needs to be refreshed with more rock. Your Construction Entrance Plates can be cleaned daily and no more rock needs to be purchased!

We will definitely use them on future projects and I recommend them as a substitute BMP for a stabilized construction entrance.
